

Application Development

tsi-systems assist Enterprises with their Architecture & Development phases by providing experienced consultants in the related fields. Our speciality is around the Oracle Fusion Middleware and Red Hat JBoss product sets, which includes:

- » Oracle SOA Suite (BPM, ESB, Integration, Portal)
- » JBoss SOA Platform (BPM, ESB, Portal)

Our consultants have many years of experienced on these products and assist Enterprises to rapidly implement these products. This allows for more focus on the business requirements of the project.

As part of the development phase, we strive to deliver quality and performing applications. We do this by utilizing our partner products. For validating and measuring the quality of software deliverables of developers, we recommend the use of CAST Software. For performance management and validation, we recommend dynaTrace Software.
