

## Application Server Management

Application Server Management refers to application server architecture, automated daily management and support of application servers.

tsi-systems assist enterprises with their JEE and .Net Application Server Management needs by providing specialist skills on vendor-specific application servers, including best practices for configuration, tuning, 24x7 maintenance and support for the chosen application server.

tsi-systems ensures that organisations are able to attain high availability, scalability and reliability of their chosen application server. tsi-systems offers certified resources for the following application server technologies: » Oracle WebLogic (Server, Integration, ESB, Portal) » JBoss (Server, ESB, Portal) » Microsoft .NET Servers

tsi-systems has developed the &ldquo;Administrator&rsquo;s Workbench&rdquo;, this product assists administrators to manage and administrate multiple Oracle WebLogic domains via a single interface. The Administrator's Workbench provides administrators with a graphical interface which assists them with the normal daily administrative tasks of Oracle WebLogic environments.
