

Application Quality Management

Application quality and performance are very important factors for the success of any business critical application. IT executives have to measure, manage and improve on the technical quality of business critical applications deriving maximum value from each stage of the applications lifecycle.

tsi-systems is the local market distributor for the CAST Application Intelligence (AI) platform. This platform provides proactive quality management at the code and architecture level and delivers immediate ROI by exposing defects - early in the development lifecycle - that testing typically cannot find. This ensures accelerated time to market, managing IT system risks, improving responsiveness to hanging business needs, and controlling maintenance costs over time. Access to continual, automated management and assessment ensures that quality is the main ingredient in any application.
