

## Application Test Automation

Over its existence, computer software has continued to grow in complexity and size. A primary purpose for testing is to detect software failures so that defects may be discovered and corrected.

tsi-systems understands that their clients struggle to balance pressure of solution delivery with adequate test coverage.

As a result, tsi-systems has partnered with iTKO to provide consultancy on iTKO's LISA product offering.

LISA is a complete no-code software testing solution that supports the entire team's development lifecycle for dynamic web apps, web services, ESB messaging layers, enterprise Java, .NET, data and legacy objects, and more. LISA will carry developers, QA teams and business analysts from unit testing, through regression testing, functional testing, end-to-end integration and load testing.
